BEAM END (POGO) SUPPORT

The Matikgate beam end (Pogo) support is a practical solution for supporting long barrier beams while maintaining the flexibility to move with the barrier beam during operation. This significantly reduces strain on the barrier mechanism, prevents beam sagging, and improves stability in windy conditions or high-traffic environments.

Ideal for barriers used in commercial, industrial, residential, and logistics applications, the Pogo support enhances safety, extends the service life of the barrier system, and ensures smooth, reliable operation.

Manufactured from robust, weather-resistant materials, it is designed for long-term performance in demanding outdoor environments.

FEATURES

- Manufactured in Portugal by Matikgate
- Provides stability to the beam in the closed position.
- Reduces stress on the barrier mechanism.

DATA

Beam End (Pogo) support	
Manufacturer	Matikgate (Portugal)
Product	Beam end support
Feature	Provides stability to the beam inthe closed position
