PRE-BUILT & PRE-WIRED CONTROL PANELS

At Bollards and Barriers Direct, our pre-built and pre-wired bollard control panels are designed to make installations faster, easier, and more reliable. Expertly assembled by our experienced technicians, every panel is professionally wired, thoroughly tested, and quality checked before leaving our workshop.

Using high-quality components and a neat, organised layout, our control panels reduce installation time, minimise on-site wiring, and help eliminate costly errors. Simply mount the panel, connect the required inputs and outputs, and you're ready to commission the system with confidence.

Whether you're installing a residential or commercial bollard automation system, our ready-to-install control panels provide a dependable solution that saves time without compromising on quality.

FEATURES

- Pre-built to suit your requirements
- Assembled by experienced technicians
- Reduce installation time
