BOLLARD CABLE

The NYY-J 4C 4-core power and control cable is the ideal choice for powering and controlling automatic security bollards in residential, commercial, and industrial environments. Designed for fixed installations, this robust cable features high-quality copper conductors, durable PVC insulation, and a tough black PVC outer sheath that provides excellent resistance to moisture, impact, and UV exposure.

Suitable for direct burial or installation in ducts and conduits, NYY-J 4C cable ensures a reliable connection between the control panel and the automatic bollard, delivering dependable power and signal transmission for smooth, consistent operation.

Whether you're installing access control at driveways, business premises, or high-security sites, NYY-J 4C offers the durability, safety, and long-term performance required for professional automatic bollard systems.

FEATURES

- NYY Cable can be installed indoors and outdoors where there is little chance of mechanical damage.
- These cables can be used for direct burial, however for protection against mechanical damage they require installation within a conduit or ducting.
- Cables can be fixed on cable trays, within conduits or fixed to walls.
- Solid annealed copper conductors.
- PVC insulated.
- PVC bedded.
